MILESTONE — Users Love Us

Email was never designed to protect sender identity.

Cybercriminals exploit this to spoof your domain, impersonate your brand or staff, and put customers and revenue at risk. AI is making these attacks faster, more convincing, and harder to detect. Anti-spam filters and user awareness training alone are no longer enough.

Mailbox providers are tightening sender standards, and DMARC is now a requirement for both security and email delivery. Non-compliance can result in emails landing in Spam or being outright rejected. To reduce risk and support deliverability, you need a consistent, enforceable way to prove who is authorized to send on your behalf.

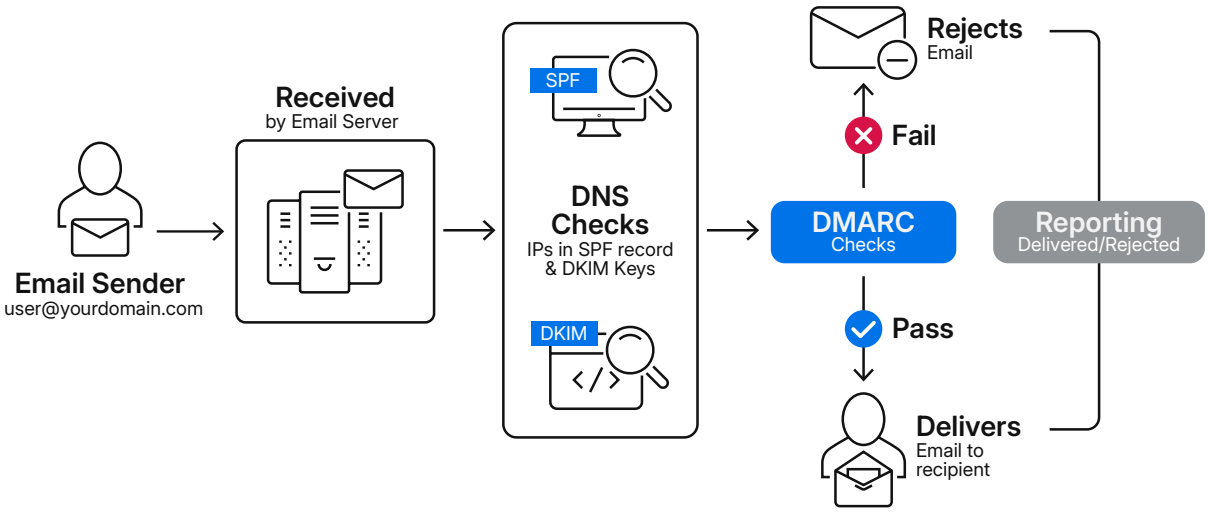
DMARC: The Global Standard for Email Sender Authentication

Sendmarc simplifies DMARC implementation and enforcement, ensuring legitimate emails reach inboxes while spoofed messages using your domain are blocked. It provides comprehensive, consolidated reporting so you can see who is sending on your behalf and maintain control over your sender identity.

How DMARC Works

Secure email gateways filter what comes in. DMARC controls what goes out in your name, protecting customers, partners, and staff from impersonation attacks your internal tools can't see.



DMARC **Benefits**

Trust

Stop fake emails sent from your domain from being delivered, ensuring recipients can trust messages from your business.

Delivery

Enforce DMARC policies that support the delivery of legitimate emails and reduce the risk of messages being filtered to Spam or Junk.

Visibility

Gain full visibility into who's sending on your behalf through one clear reporting dashboard.

Compliance

Support compliance with global regulatory standards and mailbox provider requirements.

The Importance of **DMARC Compliance** Now

In recent years, DMARC has evolved from a best practice to a formal requirement across various sectors worldwide.

Non-compliance risks email rejections, brand damage, and increased exposure to fraud, while also putting you on the back foot as mailbox providers and regulators continue to tighten sender authentication expectations.

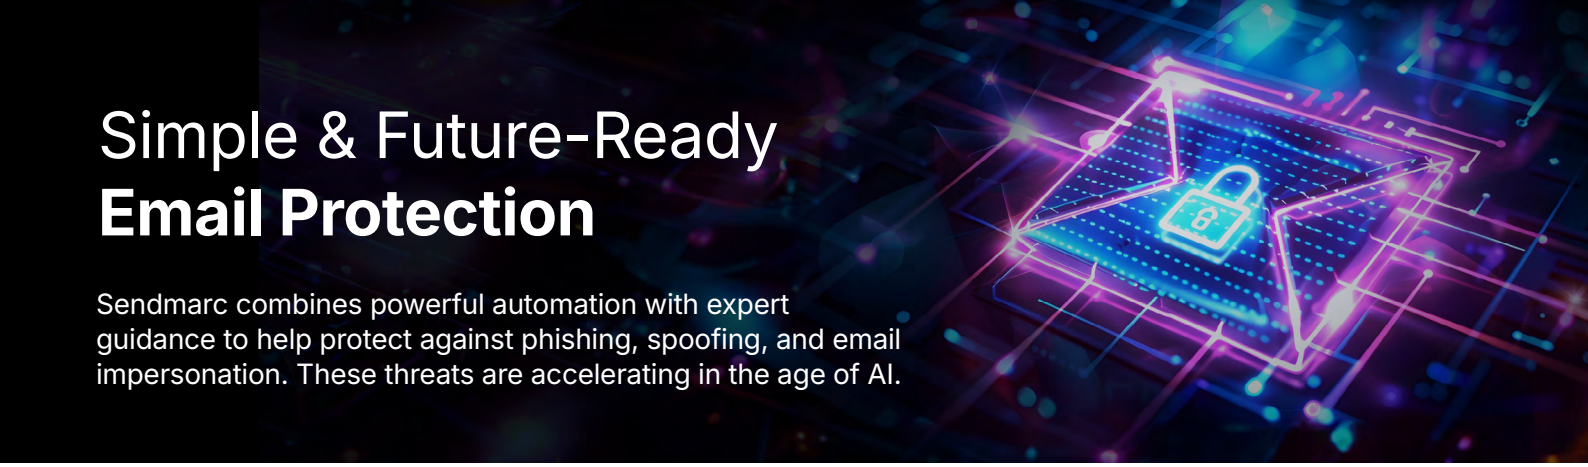
Simple & Future-Ready **Email Protection**



Sendmarc combines powerful automation with expert guidance to help protect against phishing, spoofing, and email impersonation. These threats are accelerating in the age of AI.

Sendmarc helps:

- ✓ Protect brand trust by reducing the risk of domain spoofing and impersonation
- ✓ Improve the delivery of legitimate email
- ✓ Support compliance with evolving sender authentication requirements
- ✓ Safeguard any number of domains by enforcing SPF, DKIM, and DMARC across your email ecosystem
- ✓ Provide ongoing monitoring and visibility across all sending services and domains

The Sendmarc **Difference**

Get DMARC compliant with the best software and services in 90 days guaranteed*

People

Hands-on DMARC experts who manage complexity on your behalf, reducing internal workload without compromising on security.

Platform

Built to simplify distributed email environments and enforce DMARC at scale, across every domain and sending service.

Promise

Get to the strongest DMARC policy enforcement in less than 90* days, without consuming your team's time and resources.
